

Game Project

Genre: 2D action adventure

Deadline: End of May?

Background Story: Entire version is at the Game Atlas

Game Flow:

- Metrovenia, with a little of platformer, focusing more on action, each region is made with connected stage(like Hollow Knight)
- Each region has just enemies and boss
- Each region has a hidden boss?
- When clearing each region, you can get each skill of heat and cool?
- When you kill the boss, you will get a essence of it: according to boss clear time, amount of just enemies killed, and other conditions, the rank of the essence can go up
- At the last region, finishing the final boss, you can devote the essences that you collected at the altar: the planet's restore degree will change according to the total rank of the essences that you devoted? Multi ending?

Combat system:

- real time action
- no weapon
- heat and cool on the arm
 - there must be a reason?
 - fighter style: has each power covering each arm
 - will use each skill with each arm, assign one key for each
- Skills: can change what to use at the UI
 - skill can be close-range or long range
- Gauge
 - will fill up when hitting the enemy
 - will fill up when picking up the potion or liquid medicine
 - how will it be used: use it as a cost for skills?
- Fusion skill
 - think about the condition of how to activate and use the fusion skill

- maybe, can be used when the gauge for each power is up to a certain amount?
- Maybe, there is a skill for each gauge, and when the both gauge is full, two skills fuse into fusion skill. when used separately, the skills can give big damage: but when used as a fusion skill, it can kill the enemy instantly?
- Potion
 - for health, heat gauge, cool gauge
 - no inventory for potion
 - can be healed immediately when picking up the item?
- Enemy
 - not blocking?
 - when player is attacked, they MUST avoid the attack: cannot block or parry
 - But, maybe skills can make a player invincible or able to block for a certain amount of time?
 - maybe, it can be good to give the player a dash that can pass through the enemy, as the character is invincible while performing a dash?
 - when parry time, the player can attack to parry?
 - need to adjust the frames of the attack animations for these mechanisms
 - enemies and bosses can have a attribute
 - example: enemies at abandoned underground city are weak to cool?
- Parry
 - maybe only the boss?
 - the enemy's body will glow in a certain color, and will attack after (maybe continuous attack?)
 - If the player presses the key assigned for skill of that certain color in a precise timing, the character will parry the attack, thus having a chance to attack back
 - maybe using the skill of that certain color at the chance will be expressed as strengthened skill of that certain color, giving big damage?
 - maybe using the opposite skill of that certain color at the chance will be expressed as fusion skill or instant death skill?
 - maybe, if the enemy's attack is a continuous attack, the damage of the skill after will be multiplied by the total time the player succeeded on parrying?

- the keys for each power is the basic attack key, and the parry will happen only when this basic attack of any power touches the enemy's attack at specific timing?
 - When this happens, the gauge for used power for parry will additionally go up, and the character can get stronger or become invincible for a certain amount of time?
- Relating two powers
 - when using one power, it can leave an afterimage in the background, or leave a mark on the enemy?(not decided yet)
 - before these things disappear, when player uses opposite power, the afterimage or the mark will disappear, giving special effect for the character
 - life drain, extra damage, stun?
 - Maybe putting an overlap system for afterimage or mark can be good? but it is hard to program...
- Field puzzle be solved by using two powers?
 - example: burning the bush to make way using heat power
- When a character is attacked, only its health will go down: the gauges for the powers will not change?
- When a character succeeds on attack, enemy's health will go down, and the gauge used for the attack will be additionally healed

Character:

- player's character
- just enemies
 - Abandoned underground city
 - Upgraded animals
 -
- middle boss / hidden boss: if defeated, you can skip certain amount of the path or event? or will give you new skills
- stage boss

Item

- upgrade
 - 1. using items to upgrade, item is hidden / achievable after a boss raid
 - 2. talking to NPCs to upgrade the skills/stats? using skill points or money?
- weapon: not changing, only attack stat goes up

- potion

Location

- Chapter 1: Vartela - Abandoned Underground City, Starting point
- Chapter 2: Cantun - Magic and Melee Coexisting, Second point
- Chapter 3: Kiltel Mountain - Rugged and Snowy, Third point
- Chapter 4: Aven- Everlasting Paradise, Final point
- each chapter: one big map
- moving between chapters: portal?

Art Concept

- total concept: eery, distorted, gloom, but pure, calm at the same time
- Chapter 1:
 - with rock and dirt? little plant
 - old houses and buildings made of dirt and stones
 - background: abandoned city view
 - crevices and holes
- Chapter 2:
 - castle that is protected by the magic barrier up in the sky, enchanted knights live there
 - maybe magitek or castle enchanted with magic?
 - underneath the castle, there is a huge experiment lab that experiments with pure magicians to extract the element used for magic
 - on the ground, there is a facility that collects the elements in the atmosphere
- Chapter 3:
 - rugged, snowy mountain that is harsh
 - knights train there, at the training halls
 - each training hall is specified for a certain weapon?
 - at the top, giant hole to the underground for excavating resource
 - at the top, also a big flat ground that holds a competition?

- Chapter 4:
 - a capital of the enemy
 - protected by the magic barrier up in the sky
 - enchanted knights and knights live here
 - beautiful city on the outside, with cheerful and harmonious atmosphere
 - just neglecting the fact that the world is ending?
